

ABSTRACT

In handover control methods and systems which switch  
a radio base station serving as a communicating  
5 counterpart of a mobile station, the present  
invention provides a handover control method and a  
system thereof wherein a detection is made when a  
communication while a predetermined minimum  
bandwidth secured is not possible at any mobile  
10 station communicating with the radio base station  
and upon the detection the communicating counterpart  
of the mobile station that communicates with the  
radio base station mentioned above is switched from  
the radio base station to other radio base stations.
